IP log for WTP Version 3.1 (Galileo Release)

The combined automatic IP log can be viewed with the following URL:

http://www.eclipse.org/projects/ip_log.php?projectid=webtools.common,webtools.dali,webtools.ejbtools,webtools.jeetools,webtools.jsf,webtools.servertools,webtools.sourceediting,webtools.webservices

For some reason I did not get a “submit” button to create a static copy of the log, so I captured a version from the web page and imported into this document, as Appendix 1.

The automatic IP log contains lists of committers and contributors to this release, as well as a list of 3rd party software we distribute with WTP. Below is additional information not captured in the auto-log about “works with” third party software.

But first two clarifications about entries in the automatic IP Log:

1. There is one entry labeled “pending” but it is not really pending for this release. It is just some test-related libraries, does not effect delivered functionality, and we said we could accept it when ever the IP staff could get to it (that is, it is not required for Galileo).
2. There are some 3rd party code packages listed which we do not literally distribute yet, such as Xerces 2.9.1. We are authorized to distribute it, and we will in future releases or maybe service releases, but we have not put in in our distributed code base yet since it will take some extra testing to make sure its compatible with existing function.

Other Third Party Dependencies

This section is to list and describe relationships with third party software which WTP depends on or works with. For background context, see [Eclipse Policy and Procedure for Third Party Dependencies](#).

Note: Where we list available third party software in this document, we do so only to demonstrate there are many choices for end-users. We do not mean to say those are the only available options nor do we advocate the use of any particular one.

Application Servers

We depend on Application Servers in two ways. First, and least important, we do have one function, Web Service Explorer that actually runs as a web application. We happen to depend on and use what ever Application Server ships in the Eclipse Platform, which for the Galileo release happens to be Jetty Version 6.x. We could run our WSE web app on any JEE compliant server, but we do need to know it in advance ... it can not be "swapped out" by users or adopters.

Second, and most important, creating web applications -- the whole purpose of WTP! -- depends on having some application server available. Ultimately it is up to the end user to provide their own Application Server to use with WTP, but there are some "ease of use" options that provide different paths to using one or more Application Servers:

Preview Server

We do offer, and users can make use of, a "preview server" that is built in to WTP. This is actually just making use of what ever Application server ships with the Eclipse Platform, which is currently Jetty Version 5.x. We, in WTP, do not surface the fact that this is Jetty, in order to be more "vendor neutral" and in fact could work with any JEE compliant server, but, we do need to know in advance what server it is, in order to adapt

to it specifically. There is also an HTTP Preview Server that non-java users can use to "run" HTML and Javascript documents. Under the covers, the built in HTTP Preview Server is the same as the JEE Preview Server.

These Preview Servers are offered simply to improve "out of the box" experience for novice end-users. It provides capabilities to run servlets and JSPs. Most professional web developers will want to use some specific application server that has the capabilities they need.

Server Adapters

Any server that's used with WTP needs a server adapter. This just provides a common interface for WTP to interact with the server; to start, stop, and publish to the server. There are some server adapters that are shipped with WTP, and others that are available from any vendor that wants to provide one. In some cases, those other adapters have provided us with URLs to update sites, to make it easier for users to get their server adapter. There are, undoubtedly other server adapters (and servers) we know nothing about.

Server Adapters that are built-in (shipped with WTP)

- Tomcat v3.2
- Tomcat v4.0
- Tomcat v4.1
- Tomcat v5.0
- Tomcat v5.5
- Tomcat v6.0
- IBM WebSphere V6.0
- JBoss v3.2.3
- JBoss v4.0
- JBoss v4.2
- JBoss v5.0
- JOnAS v4
- Oracle OC4J Standalone 10.1.3
- Oracle OC4J Standalone 10.1.3.n

Server Adapters that are available from built-in update sites

- BEA WebLogic 10.3
- BEA WebLogic 10.0

- BEA WebLogic 9.x
- BEA WebLogic 8.1
- Pramati Server 4.1
- Pramati Server 5.0
- Geronimo v1.0
- Geronimo v1.1.x
- Geronimo v2.0
- Glassfish v1
- Glassfish v2
- Glassfish v3
- Jetty 6.0
- WASCE v1.1.x
- WASCE v2.0

Installable Runtimes

Normally when users install their own Application Server, they simply tell us where, on their file system, it is (already) installed. If someone picks that they want to use a Tomcat server, we do offer an option (along with the already existing location option) that they can download and install Tomcat from the Apache download site. In that case, we do show them the appropriate Apache license which they must agree to, before the download of the zip file proceeds.

This option is provided just as an ease-of-use option to allow beginning users to get started easier and more quickly.

Java Persistence Frameworks

JPA runtimes come built in with some application servers, but if not, users would have to download and install their own. Several of these frameworks are listed below to demonstrate the many options available to the end-user.

JPA Open Source libraries

- EPL - EclipseLink
- Apache - Open JPA
- CDDL - TopLink Essentials (available from Glassfish project)
- GPL - JBoss Hibernate

JPA Proprietary libraries

- Oracle TopLink
- BEA Kodo

JSF Runtimes and Component Libraries

To execute a JSF application you need an implementation of the JSF spec and one or more component libraries. You can get the implementation plus a core set of components from

- Sun (<https://javaserverfaces.dev.java.net/download.html>)
- Apache MyFaces (<http://myfaces.apache.org/download.html>).

JEE 5 compliant application servers implementations come with the JSF support built-in. Users can get additional component libraries from a wide range of vendors including

- Apache MyFaces Tomahawk
- Apache MyFaces Trinidad
- ICEFaces
- JBoss RichFaces
- Oracle's ADF Faces
- Project Woodstock

Axis2 Runtimes

The Axis2 Web services tools in WTP are an optional feature. If users want to install those tools and make use of them, they will need to have an Axis2 Runtime available. Users can download and install the Axis2 runtime from readily available open source projects (e.g. see [Apache Axis2](#)). Then they will have to specify the location of the Axis2 runtime to the WTP Axis2 tools.

XDoclet

For Java EE 1.4, EJB 2.1, there is a technique of developing (defining) EJBs that depend on having extra annotations in JavaDoc comments. To make use of this technique, users have to download and install XDoclet, which is readily available from free, open source projects (e.g. see [XDoclet at Sourceforge](#)). We do not ship this support built-in to WTP, simply because it would add a fairly substantial amount of code (roughly 8 M Bytes) to the foot print, and we felt there are not enough users of this particular technique to justify that increased footprint. In earlier versions of WTP, XDoclet was also (optionally) used in Servlet Wizards. But this support is not needed anymore.

For the more recent JEE 5 servers and EJB 3 (and JPA) this annotation technique is simply built in to the Java 5 language.

ICU

ICU is some library code that improves the base internationalization support in Java (e.g. for sorting lists correctly, etc). This comes shipped with the base Eclipse Platform, but our code does depend on it being present, so it is technically a pre-req. We consider this an "exempt pre-req" (exempt from separate IP review) since the Eclipse Foundation, via the Yearly Release Train requirements, requires its use where appropriate.

Appendix 1 : Auto-IP Log for WTP 3.1 Combined Sub-projects

webtools.common,
 webtools.dali,
 webtools.ejbttools,
 webtools.jeetools,
 webtools.jsf,
 webtools.servertools,
 webtools.sourceediting and
 webtools.webservices

This IP Log was generated dynamically from automatically collected project information on 6/3/2009.

263458	2.3K	Enter key is ignored Adds a try/catch statement to catch an exception in the JavaAutoIndentStrategy
263465	1.1K	wrong assumption about return type Fixes the invalid error message for unknown return types
263468	1.2K	Wrong "Unreachable code" error decoration Updates in analyseCode() method of MethodDeclaration class.
265545	254.1K	Fix various problems with the new JavaScript Project wizard Cleaned up some API issues in the last patch
266947	1.8K	JSDoc export wizard should be disabled from the UI until it works correctly. Removes the JSDoc export wizard from the plugin.xml file.
267053	1.1K	Internal validation error NullPointerException on JavadocFieldReference A check to avoid the NPE - I don't think these "Javadoc" classes have ever been updated to work well with JSDoc
267133	848	Unexpected Cannot Convert From boolean to Boolean warning Correctly converts boolean values in BaseTypeBinding
267843	5.6K	JSDoc formatting errors in system.js

		Fixes formatting errors
268066	970	Unexpected 'Cannot make a static reference to the non-static function x(any) from the type Y' Updates the library file
268171	49.1K	Remove unused or no longer needed problems from ProblemReporter Removed methods from ProblemReported and other related clean up
268542	80.3K	Remove unused validation problems Removes unused validation problems
268542	204.9K	Remove unused validation problems More problems removed
269000	1.3K	Content assist does not work on negative numbers Fixes the infer engine for unary expressions
269004	1.0K	No content assist on object literal with "string" values Update the InferEngine to handle Strings in Object Literals
269055	9.6K	Object Literal definition is not treated as an Object Updates to the InferEngine, ObjectLit resolving, and junit tests
269098	9.8K	system.js shows the call method on a Function accepting an array as its second property Updates the system.js file
269204	1.7K	JSDT should have an anonymous function template Adds the template
269263	3.9K	The window object has some missing and incorrect properties Updated the browserWindow.js file
270529	789	JavaScript Resource node should be expandable in the common navigator Removed possibleChild change
271881	1.4K	The jsdt extension of the navigatorContent is activated even if the project doesn't have the jsdt facet Updates plugin.xml
272614	5.5K	Preferences: Double entries for Occurrences and Override indicators Updates the plugin.xml to use unique key values
273554	981	Unexpected error message for mathematical term (wrong detection of Regex) Fixes the scanner in the checkIfDivide method.
275176	1.1K	Object literal bracket should should be auto closed if close bracket preference set Updates the BracketInserter class
Danny Ju (oracle.com)		
251293	182.4K	[Contributions] New JPA Entities from Tables Wizard jpt.gen patch
251293	248.4K	[Contributions] New JPA Entities from Tables Wizard jpt.ui patch
251293	28.1K	[Contributions] New JPA Entities from Tables Wizard Images used by entity gen wizard
251293	49.1K	[Contributions] New JPA Entities from Tables Wizard Patch for jpt.gen and jpt.ui
265539	3.1K	Downlaodable library should support filtering org.eclipse.wst.common.project.facet.core
265539	7.9K	Downlaodable library should support filtering For org.eclipse.jst.common.project.facet.core
268417	4.1K	Entity Generation - auto for key generator gives error

		added missing file in second patch
268422	786	Entity Generation - embeddedId property rename from 'compId' to 'id' renamed composite PK property name to "id"
268429	2.0K	Generate Entities wizard allows you to press Next when not connected Fixed
268438	1.9K	Entity Generation - Embeddable, Version, ManyToMany generated with () Fixed template
268445	1.6K	Entity Generation - m-m with JoinTable could guess the owner better Re-submit single file
268547	1.0K	Entity Generation - unnecessary column name written out when insertable/updatable are written Fixed template
268548	2.0K	Entity Generation - velocity logging needs to be turned off Bump up Velocity log level to prevent the warnings in log
268552	11.6K	Entity Generation - fully qualified class names generated Generate import statements to avoid fully qualified type names in code
268554	1.2K	Entity Generation - persistent state issue in association property names Fix
268555	5.8K	Entity Generation - restore defaults in wizard Added "Restore Defaults" button to wizard
268562	12.7K	Entity generation - allow user to select a source folder Fixed UI issue
268588	1.0K	Entity Generation - choose property access and the radio buttons populate incorrectly Fix
268594	2.0K	Entity Generation - layout of Domain Java Class panel is off Fixed UI
270306	893	Entity Generation - NPE while generating entities on MS-SQL server Added a NULL check to getter method
270329	1.9K	Entity Generation - Primary key should be listed first in table/column tree Fixed both UI and Code Gen
270871	3.8K	Entity Generation - 1-Many Relationship with composite keys does not add referencedColumnName as it should Fixed
270966	2.9K	Entity Generation - wizard does not detect relationships involving composite keys Fix method which does not handle FK with multi-column pairs
270982	2.0K	Entity Generation - Select Tables dialog does not update schema combo after adding new connection Fixed another issue when DB connection can't be established
272376	2.5K	Entity Generation - disabled association showing up again as enabled after relaunch Fixed
272696	3.3K	relationship mappings generated incorrectly after fix to bug 270966 Fixed computeManyToMany() logic
275958	1.7K	Setting the default package on the Generate Entities from Tables Wizard doesn't set package field. Another patch implementing behavior described in comment #7
