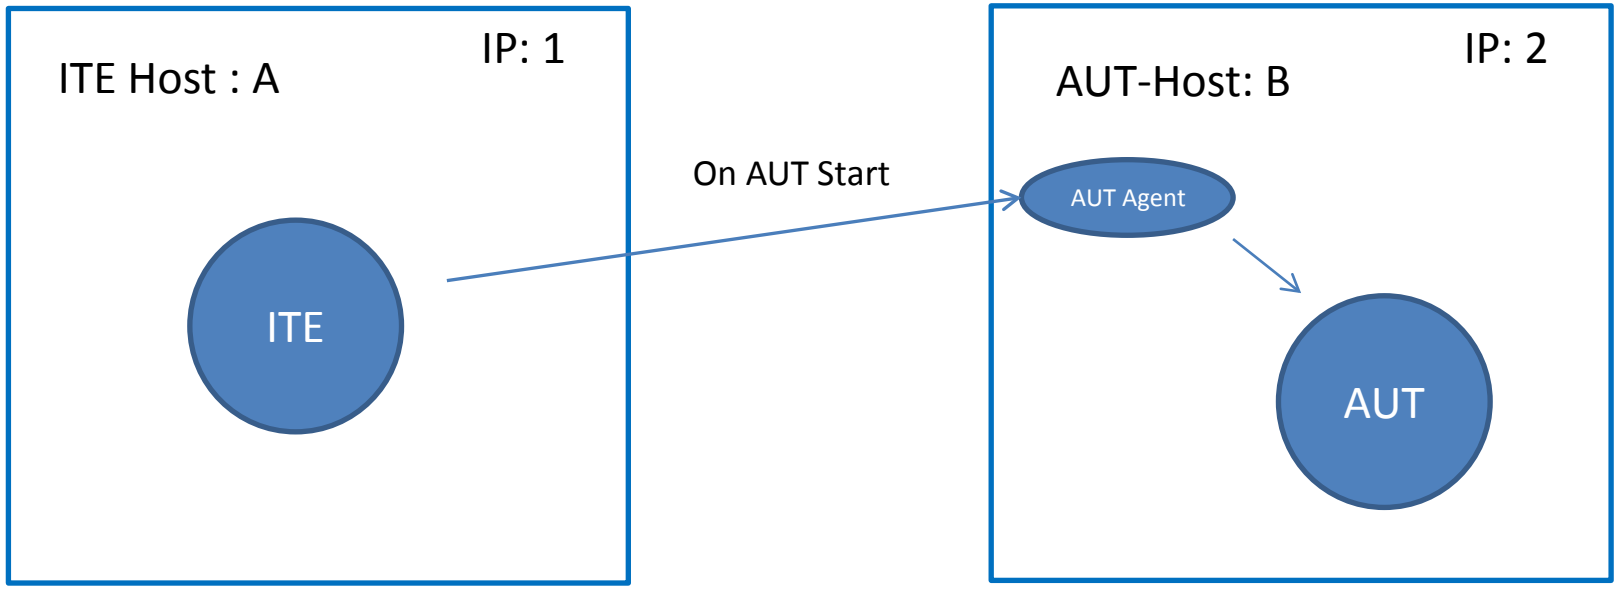
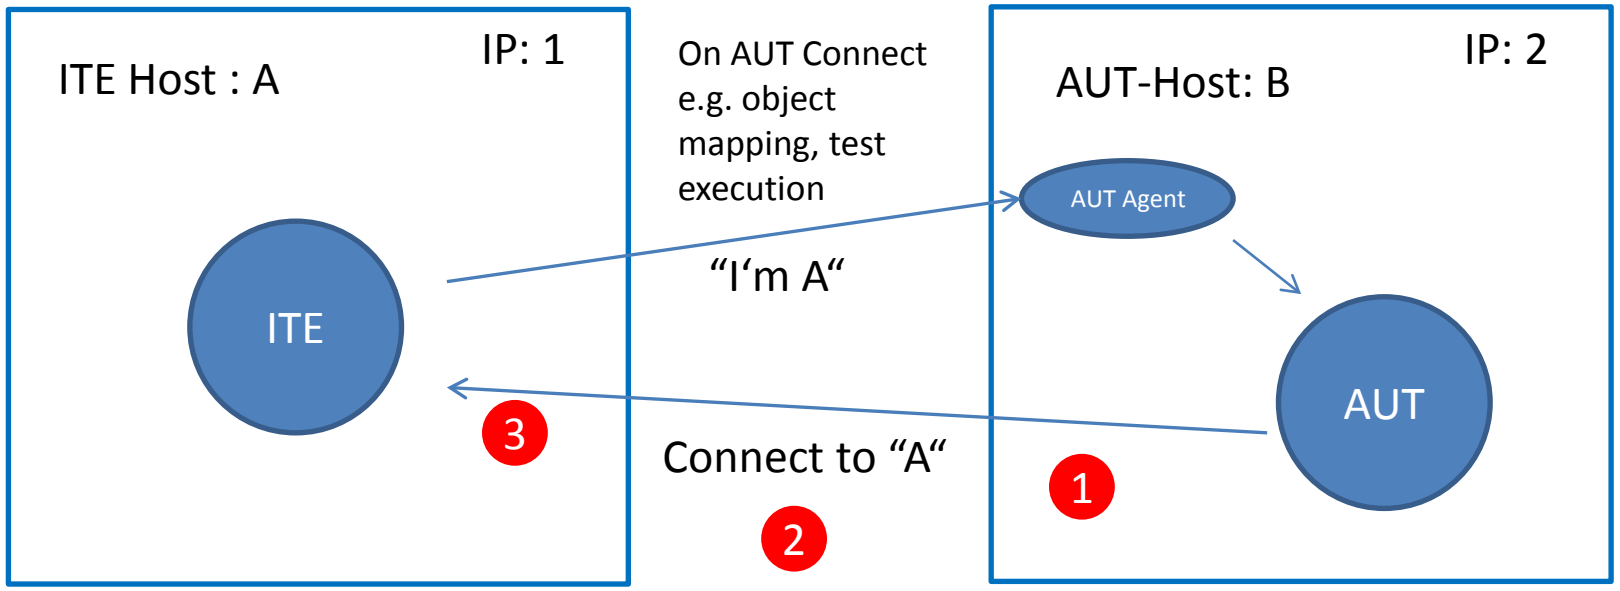
When starting an AUT:

1. Connection from ITE Host to AUT Host
2. No connection from AUT Host to ITE Host



When connecting to an AUT for test execution:

1. Connection from ITE Host to AUT Host – hostname for ITE host is transferred
2. Connection from AUT Host to ITE Host via the transferred hostname



Possible problems:

1. Outgoing connections from AUT host are blocked
2. Hostname cannot be resolved because no DNS entry
3. Incoming connections to ITE host blocked (most likely)
