

Tabelle1

This is the statistic without any discount

cust.-no.	Invoice-no.	Order-no.	company	Net-total	tax	gross
1325849	6866459	8846654	Doe Corp.	10.000,00 €	500,00 €	10.500,00 €

The next two examples are showing one statistic with three discounts and one with only two discounts. There can be more discounts and this is one report. I don't know how many discounts there can be. I wanted to get this with a „counter“, which is giving me the amount. Based on this information I wanted to add the discount rows in the dataset and the columns in the table.

cust.-no.	Invoice-no.	Order-no.	company	Net-total	discount	total subtotal	tax	gross
12312312	12412412	235235	Doe Ltd.	20.000,00 €	-3.242,00 €	16.758,00 €	3.184,02 €	19.942,02 €

Discount 2%	Discount 10%	Discount 5%
400,00 €	1.960,00 €	882,00 €

cust.-no.	Invoice-no.	Order-no.	company	Net-total	discount	total subtotal	tax	gross
15546	65665464	654646	Doe Corp.	5.000,00 €	247,00 €	4.753,00 €	903,07 €	5.656,07 €

Discount 2%	Discount 3%
100,00 €	147,00 €
