

I have created following model :

```
@namespace(uri="form", prefix="form")
```

```
@gmf
```

```
package form;
```

```
@gmf.diagram
```

```
class Form {
```

```
@gmf.compartment
```

```
    val View[1] view;
```

```
}
```

```
class UIElement{
```

```
    attr String cssStyle;
```

```
    attr String cssClass;
```

```
}
```

```
@gmf.node(label="name")
```

```
class View{
```

```
    attr String name;
```

```
@gmf.compartment
```

```
    val Window[*] windows;
```

```
@gmf.compartment
```

```
    val Canvas[*] canvases;
```

```
}
```

```
@gmf.node(label="name")
```

```
class Window extends UIElement{
```

```
    attr String name;
```

```
}
```

```
@gmf.node(label="name")
```

```
class Canvas extends UIElement{
```

```
    attr String name;
```

```
}
```

and Ecore2GMF.eol

```
var shape = findShape('ViewWindowsCompartmentFigure');
```

```
shape.layout = new GmfGraph!GridLayout;
```

```
operation findShape(name : String) {
```

```
    return GmfGraph!Shape.all.selectOne(sls.name = name);
```

```
}
```

After code generation GridLayout is not applied
