Workshop theme **Eclipse** was initially designed as an integrated development environment (IDE) for object-oriented application development. Today **Eclipse** is an open source **community** whose projects are focused on building an open development platform comprised of extensible frameworks, tools and runtimes for building, deploying and managing software across the lifecycle. This workshop is the seventh yearly meeting of the Italian Eclipse Community which includes universities, public institutions and industries, researchers and practitioners, students and professionals, all joined by the interest in promoting, experimenting, extending, and supporting the Eclipse platform. The Eclipse-IT 2012 will host three tracks

- **Technical** track for research papers with a standard presentation at the workshop.
- **Student** track for practical experience report, plug-in and demo related to the Eclipse technology, with a presentation or live demo at the workshop.
- **Public Institutions (P.A.), Industry and defense** track with a short paper or demo and the presentation at the workshop.
