OPENMDM ANNUAL MEETING

July 25st 2017
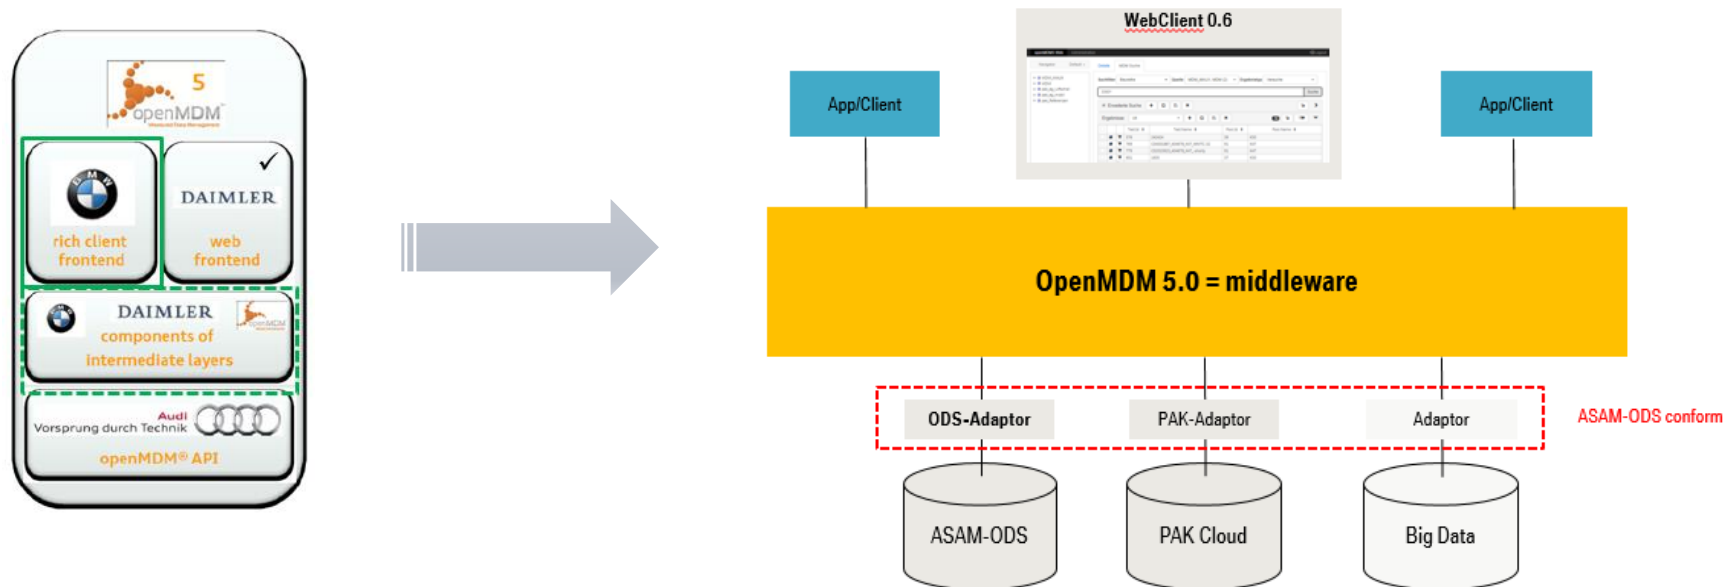

DRIVER STATEMENTS

- ## From initial „Job-Split" to openMDM 5.0

  - openMDM EWG is working: SC, AC, QC, Toolkit-Manager, Dev-Team, Requirements, services, …
  - openMDM „dev 0.7" available (middleware and web client)
  - Functional range: Multiple ASAM ODS compliant data sources with different data models can be handled

DRIVER STATEMENTS

- ## Next Steps: Readyness of openMDM 5 for productive use

  - Implementation of known requirements (openMDM API refinement, JEE-Integration, Search, Write/Change/Delete, Backlog)

  - Stabilization of the openMDM 5 layer (API) and the web client application

  - Load and performance tests in real environments

  - Integration Role / Rights (access, application functionality)

- ## Essential Epics

  - Measurements-Quantities / -Points

  - Maintenance openMDM kernel and modules

  - Interface to handle Orders, support external Tools (shopping basket) – „standardized interfaces"

  - Integration ASAM ODS 6.x (REST, „BigData")
